

To Whom it May Concern:

XM radio is the only radio that I currently listen to because the content quality and the signal quality are unsurpassed by anything that local radio has to offer. When I travel, I use their traffic and weather channels to help me with my commute. It is very important to me to be able to know that I can obtain detailed weather and traffic information immediately when I need it instead of trying to find a local broadcaster and then waiting on them to provide me with that information. I urge you to please reject the NAB's petition 04-160.

Thank you very much.
